ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: REMOVABLE STENT

(57) Abstract: The invention is relative to a stent (1) with a tubular support frame (2) consisting of axially successively following, interconnected annular segments (3, 4, 5), which support frame (2) is surrounded on its outside by a thread (11). The thread ends (12, 13) are guided via a deflection (14) from the outside into support frame (2), where they are coupled by a connector consisting of a material visible in x-rays. Deflection (14) is realized by two deflection elements (15, 16) in the form of eyelets provided on annular segment (3). Deflection elements (15, 16) are arranged on the circumference of support frame (2) at an interval from one another and are provided on end-side annular segment (3), viewed in longitudinal direction L of the stent.
